

Dear Families,

This week, children will learn that reptiles are a special kind of animal that breathes air, has a backbone, has scales or a shell or both, and is cold-blooded. Reptile babies emerge from eggs. Children will consider these characteristics to determine if an animal is a reptile or not.

The letter of the week is Nn and we will discuss how God created Land. In math, children will visualize sets of 6-9.

**There is no school on Monday for a teachers' professional development day.**

This week's *Family Connections* activities can be found at:
